

To set up dashboard after login.

Click on dashboard and under it click on Create button.

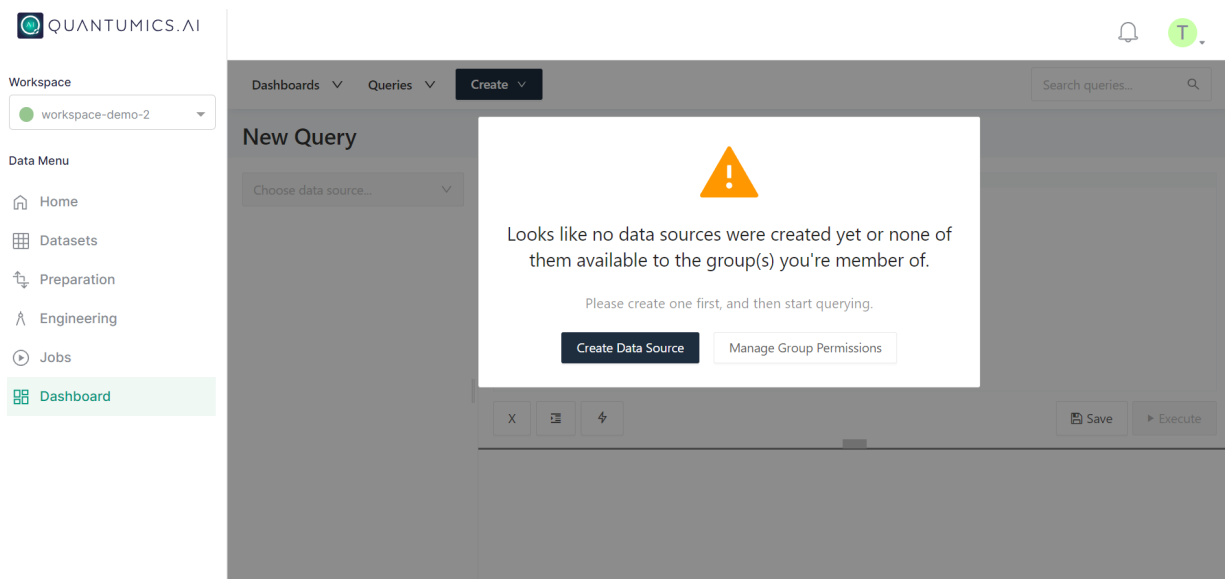

On click of Create button, it will show two drop down.

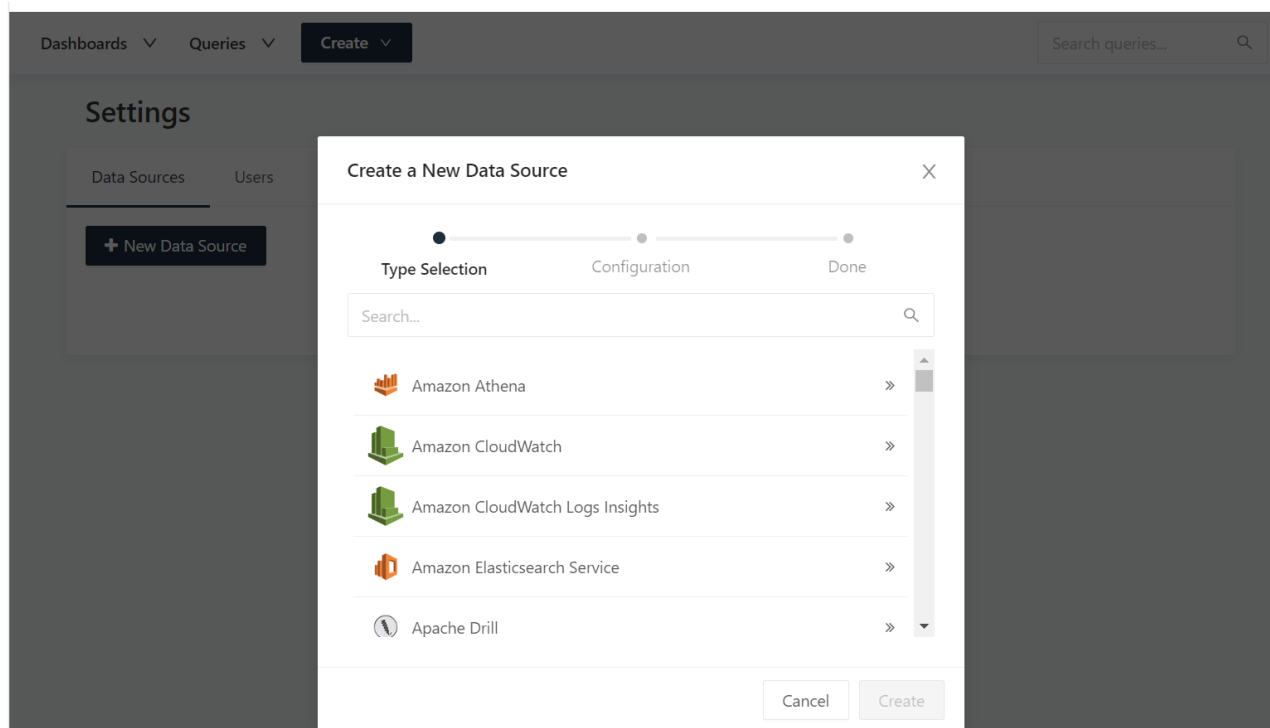

1.New Query

2.New Dashboard

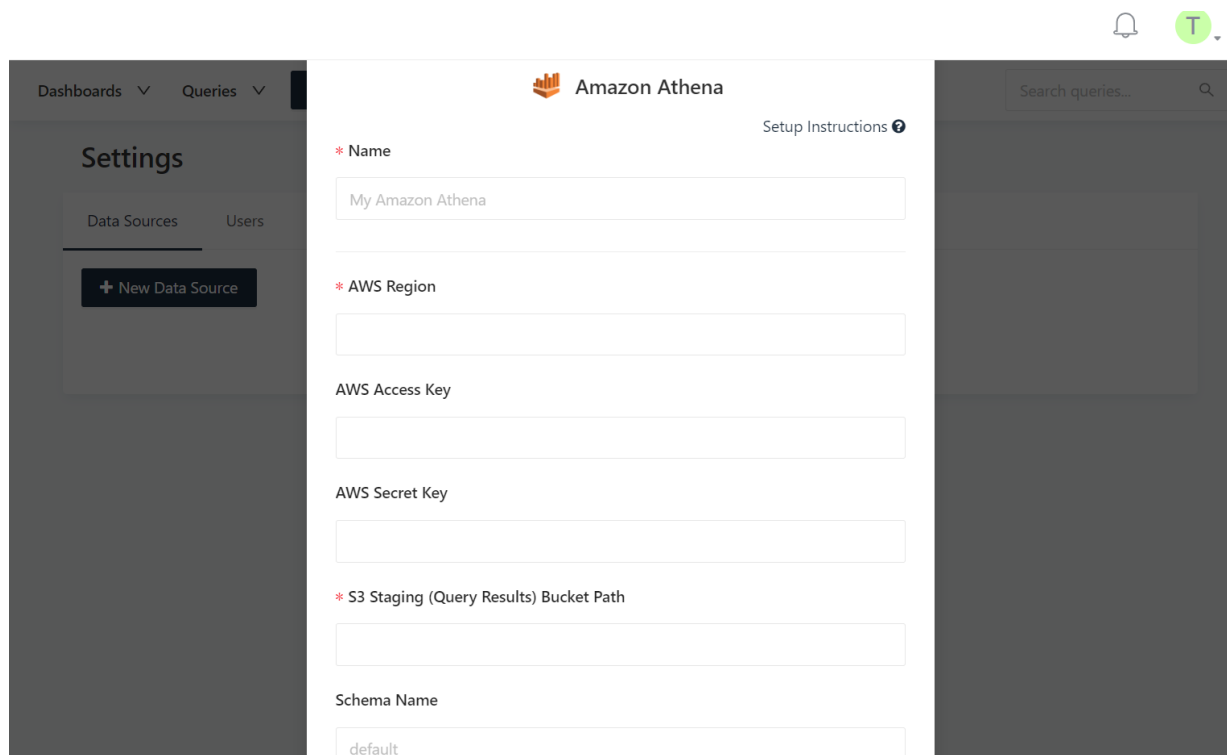

Click on New Query. It will ask to setup data source.

Click on Create Data Source. It will show below page.

Select Amazon Athena and create. It will show below screen.

Provide the below details.

Name (Any name you want to give)

Aws Region (the region where all Quantumics.AI resources deployed ex: ap-south-1)

Aws Access Key (Access Key you created using CloudFormation template)

Aws Secret Key (Secret Key you created using CloudFormation template)

S3 Staging Bucket Path. (You have to provide entire path which variable
S3_ATHENA_QUERY_LOCATION in .env file.)

Once above details are provided. User can click on create. Post that user can test the connection. Once it is successful click on Create dropdown mentioned in the first step and select create query.
